

PROJECT REPORT ON

**“Online (FRP) Door Ordering System ”**

Submitted in partial fulfillment of the requirements of

M.Sc(Computer Science)Semester – II

Developed by:

**Miss. Pooja Bahiram**

AND

**Miss. Panchshila Kharat**

Guided by:

**Ms. A. D Bhandare**

Submitted to :

Department of Computer Science

K.S.K.W. Art's , Commerce & Science College Cidco , Nashik

## **Introduction**

This project is an android based door ordering system. The project objective is to ordering the online FRP door application into android platform.

Online FRP door is the process where by consumers directly order FRP door form this application. It is a form of electronic commerce. This project is attempt to provide the advantages of online FRP door ordering to customer of a real shop. It helps buying the product shop anywhere through the internet by using an android device.

## ***Existing system***

The existing system refers to the system that is currently being followed by the door ordering. Presently all the functionality are done manually. If customer wants to order an products he should visit the shop to select door Order door item, pay for the item and get the door product slip. Then he should go to the door counter to get the door taking the bill. Then only we can get the door. This makes the person quite difficult and tedious since they must stay in the queue. The main disadvantage is time consuming

## Propose system

Our proposed system is an online FRP door ordering system that enables ease for the customers the proposed system objective to overcome all the limitations and drawbacks of the existing system. The online FRP door ordering existing system is user friendly application. The main objective of the system is its simplicity of design and easy of implementation that show and help to collect most of the information about door service the system requires very low system resources and the system will work in almost all configuration. The data can be retrieved easily. The interface is very user friendly the data are well protected for personal use and data processing is very fast . The payment can be made online or pay-on-delivery system. For more secured ordering separate accounts are maintained for each user by providing them an ID and a password.

## ***Scope of the project***

Here we overcome drawbacks of existing system by using applications . It is easy to maintain all the information about the shop, customer and the product. The system will reduce the efforts of sellers and also it makes updating and deleting the data easy. This system provide online ordering of frp door .It provides different types of door. Customer can choose one or more items to place an order which will add to cart. The admin panel to manage and update the orders. Strong username and password.

## **Feasibility Study**

Feasibility study preliminary investigation where we check the.

Project is feasible or not for development. Check the required resources availability. Check the overall cost for development the Project and final send the ideal study to management. There are 3 parts in feasibility study.

### **1) Operational Feasibility**

This application is very easy to operate as it is made user friendly with the help of very effective tools main consideration in user easy access to all the functionality on the application. This application should be word accurate and secure the information. Operational feasibility is the measure of the a proposed system solve the problems. The application will easily to operate as it doesn't affect the existing organizational structure and support the system so the application will be operationally feasible

### **2) Technical Feasibility**

Technical feasibility centers around the technologically system development techniques such as android studio, Java and SQLite database without any problems. This system all the hardware and software required for developing and installing the system is available with the organization.

### **3) Economical Feasibility**

The system to be developed is economically feasible and the benefit is out weighing the cost. Since this project already computerizes the existing system and more advanced than the current system reduces and change the labor force to computerize system. Reduces the cost of the material used

## Proposed H/W & S/W platform

### *Hardware:-*

1. Disk space minimum.
2. 8 GB RAM.

### *Software:-*

1. Android studio.
2. Language: - Java.
3. Database: - SQLite.
4. Windows 11 operating system

## Database Dictionary

### Register / Login

Field Name	Field Type	Constraint
User_id	Integer	Primary key
Email	Varchar	Not Null
Password	Varchar	Not Null
C_password	Varchar	Not Null

### Admin

Field Name	Field Type	Constraint
A_id	Integer	Primary key
A_name	Varchar	Not Null
A_email	Varchar	Not Null
A_mobileno	Integer	Not Null
A_password	Varchar	Not Null

## Customer

Field Name	Field Type	Constraint
C_id	Integer	Primary key
C_name	Varchar	Not Null
C_address	Varchar	Not Null
C_email	Varchar	Not Null
C_mobilen0	Integer	Not Null
A_id	Integer	Foreign key

## Product

Field Name	Field Type	Constraint
Pd_id	Integer	Primary key
Pd_name	Varchar	Not Null
price	Integer	Not Null
Size	Integer	Not Null
Color	Varchar	Not Null
A_id	Integer	Foreign key

### Product Type

Field Name	Field Type	Constraint
T_id	Integer	Primary key
T_name	Varchar	Not Null
C_id	Integer	Foreign key
Pd_id	Integer	Foreign key

### Customer\_product Type

Field Name	Field Type	Constraint
C_id	Integer	Foreign key
T_id	Integer	Foreign key

### Order

Field Name	Field Type	Constraint
O_no	Integer	Primary key
O_status	Varchar	Not Null
C_id	Integer	Foreign key

### Customer\_order

Field Name	Field Type	Constraint
C_id	Integer	Foreign key
O_id	Integer	Foreign key

### Cart

Field Name	Field Type	Constraint
Cart_id	Integer	Primary key
Quantity	Varchar	Not Null
Pd_id	Integer	Not Null
D_id	Integer	Foreign key

### Details

Field Name	Field Type	Constraint
D_id	Integer	Primary key
Pd_id	Integer	Foreign key
C_id	Integer	Foreign key

## Payment

Field Name	Field Type	Constraint
P_id	Integer	Primary key
Card_no	Integer	Not Null
P_Type	Varchar	Not Null
Card_name	Varchar	Not Null
C_id	Integer	Foreign key
D_id	Integer	Foreign key

## Receipt

Field Name	Field Type	Constraint
R_id	Integer	Primary key
Date	Date	Not Null
P_id	Integer	Foreign key
C_id	Integer	Foreign key
A_id	Integer	Foreign key

## Conclusion

The project and entitled online FRP Door Ordering System was completed successfully. The system has been developed with much care and free with errors and at the same time is efficient and less time consuming. The propose of this project was to developed android application and practical knowledge and several topics like designing application page using xml ,java, designing of android application and management of database using SQLite database. The entire system is secured. Also the project help us understanding about the development phases of a project software development lifecycle.
